

# Table of Contents

---

**PREFACE XIII**

---

**ABOUT THE AUTHORS XVII**

---

**CHAPTER 1 INTRODUCTION 1**

---

- 1.1 Models and Modeling 1
  - 1.1.1 Why Study Modeling? 2
  - 1.1.2 Models in Business 2
  - 1.1.3 Models in Business Education 3
  - 1.1.4 Benefits of Business Models 3
- 1.2 The Role of Spreadsheets 4
  - 1.2.1 Risks of Spreadsheet Use 5
  - 1.2.2 Challenges for Spreadsheet Users 6
  - 1.2.3 Background Knowledge for Spreadsheet Modeling 7
- 1.3 The Real World and the Model World 7
- 1.4 Lessons from Expert and Novice Modelers 9
  - 1.4.1 Expert Modelers 9
  - 1.4.2 Novice Modelers 11
- 1.5 Organization of the Book 12
- 1.6 Summary 13
  - Suggested Readings 14

**CHAPTER 2 MODELING IN A PROBLEM-SOLVING FRAMEWORK 15**

---

- 2.1 Introduction 15
- 2.2 The Problem-Solving Process 16
  - 2.2.1 Some Key Terms 16
  - 2.2.2 The Six-Stage Problem-Solving Process 18
  - 2.2.3 Mental Models and Formal Models 23
- 2.3 Influence Charts 24
  - 2.3.1 A First Example 25
  - 2.3.2 An Income Statement as an Influence Chart 27
  - 2.3.3 Principles for Building Influence Charts 27
  - 2.3.4 Two Additional Examples 28
- 2.4 Craft Skills for Modeling 31
  - 2.4.1 Simplify the Problem 33
  - 2.4.2 Break the Problem into Modules 34
  - 2.4.3 Build a Prototype and Refine It 35
  - 2.4.4 Sketch Graphs of Key Relationships 38
  - 2.4.5 Identify Parameters and Perform Sensitivity Analysis 39
  - 2.4.6 Separate the Creation of Ideas from Their Evaluation 41
  - 2.4.7 Work Backward from the Desired Answer 42
  - 2.4.8 Focus on Model Structure, not on Data Collection 43
- 2.5 Summary 45
  - Suggested Readings 46
  - Exercises 46

**CHAPTER 3 SPREADSHEET ENGINEERING 49**

---

- 3.1 Introduction 49
- 3.2 Designing a Spreadsheet 51
  - 3.2.1 Sketch the Spreadsheet 51
  - 3.2.2 Organize the Spreadsheet into Modules 52
  - 3.2.3 Start Small 53
  - 3.2.4 Isolate Input Parameters 54
  - 3.2.5 Design for Use 54
  - 3.2.6 Keep It Simple 54
  - 3.2.7 Design for Communication 55
  - 3.2.8 Document Important Data and Formulas 55
- 3.3 Designing a Workbook 57
  - 3.3.1 Use Separate Worksheets to Group Similar Kinds of Information 58
  - 3.3.2 Design Workbooks for Ease of Navigation and Use 59
  - 3.3.3 Design a Workbook as a Decision-Support System 60
- 3.4 Building a Workbook 62
  - 3.4.1 Follow a Plan 62
  - 3.4.2 Build One Worksheet or Module at a Time 62
  - 3.4.3 Predict the Outcome of Each Formula 62
  - 3.4.4 Copy and Paste Formulas Carefully 62
  - 3.4.5 Use Relative and Absolute Addressing to Simplify Copying 62
  - 3.4.6 Use the Function Wizard to Ensure Correct Syntax 63
  - 3.4.7 Use Range Names to Make Formulas Easy to Read 63
  - 3.4.8 Choose Input Data to Make Errors Stand Out 64
- 3.5 Testing a Workbook 64
  - 3.5.1 Check That Numerical Results Look Plausible 64
  - 3.5.2 Check That Formulas Are Correct 65
  - 3.5.3 Test That Model Performance Is Plausible 68
- 3.6 Summary 68
  - Suggested Readings 69
  - Exercises 69

**CHAPTER 4 ANALYSIS USING SPREADSHEETS 71**

---

- 4.1 Introduction 71
- 4.2 Base-Case Analysis 72
- 4.3 What-If Analysis 72
  - 4.3.1 Benchmarking 73
  - 4.3.2 Scenarios 74
  - 4.3.3 Parametric Sensitivity 77
  - 4.3.4 Tornado Charts 79
- 4.4 Breakeven Analysis 81
- 4.5 Optimization Analysis 83

**X TABLE OF CONTENTS**

4.6	Simulation and Risk Analysis	84		
4.7	Summary	85		
	Exercises	85		
<b>CHAPTER 5 DATA EXPLORATION AND PREPARATION 89</b>				
5.1	Introduction	89		
5.2	Database Structure	90		
5.3	Types of Data	93		
5.4	Data Exploration	94		
	5.4.1 Understand the Data	94		
	5.4.2 Organize and Subset the Database	95		
	5.4.3 Examine Individual Variables and their Distribution	99		
	5.4.4 Calculate Summary Measures for Individual Variables	100		
	5.4.5 Examine Relationships among Variables	102		
5.5	Summary	110		
	Suggested Readings	110		
	Exercises	110		
	Appendix 5.1 Data Preparation	112		
	A.5.1 Handling Missing Data	112		
	A.5.2 Binning Continuous Data	112		
	A.5.3 Transforming Categorical Data	113		
	A.5.4 Functional Transformations	114		
	A.5.5 Normalizations	115		
<b>CHAPTER 6 CLASSIFICATION AND PREDICTION METHODS 117</b>				
6.1	Introduction	117		
6.2	Preliminaries	117		
	6.2.1 The Problem of Over-fitting	117		
	6.2.2 Partitioning the Database	119		
	6.2.3 Performance Measures	120		
6.3	The $k$ -Nearest Neighbor Method	122		
	6.3.1 Overview of the $k$ -Nearest Neighbor Algorithm	123		
	6.3.2 An Application of the $k$ -Nearest Neighbor Algorithm	124		
	6.3.3 Strengths and Weaknesses of the $k$ -Nearest Neighbor Algorithm	128		
6.4	The Naïve Bayes Method	128		
	6.4.1 Overview of the Naïve Bayes Algorithm	129		
	6.4.2 An Application of the Naïve Bayes Algorithm	131		
	6.4.3 Strengths and Weaknesses of the Naïve Bayes Algorithm	132		
6.5	Classification and Prediction Trees	134		
	6.5.1 Overview of Classification and Prediction Trees	135		
	6.5.2 An Application of Classification and Prediction Trees	136		
	6.5.3 Strengths and Weaknesses of Classification and Prediction Trees	142		
6.6	Multiple Linear Regression	143		
	6.6.1 Overview of Multiple Linear Regression	144		
	6.6.2 An Application of Multiple Linear Regression	146		
	6.6.3 Strengths and Weaknesses of Multiple Linear Regression	150		
6.7	Logistic Regression	151		
	6.7.1 Overview of Logistic Regression	151		
	6.7.2 An Application of Logistic Regression	153		
	6.7.3 Strengths and Weaknesses of Logistic Regression	157		
6.8	Neural Networks	158		
	6.8.1 Overview of Neural Networks	159		
	6.8.2 An Application of Neural Networks	160		
	6.8.3 Strengths and Weaknesses of Neural Networks	164		
6.9	Summary	164		
	Suggested Readings	164		
	Exercises	164		
<b>CHAPTER 7 SHORT-TERM FORECASTING 167</b>				
7.1	Introduction	167		
7.2	Forecasting with Time-Series Models	167		
	7.2.1 The Moving-Average Model	168		
	7.2.2 Measures of Forecast Accuracy	171		
7.3	The Exponential Smoothing Model	172		
7.4	Exponential Smoothing with a Trend	176		
7.5	Exponential Smoothing with Trend and Cyclical Factors	178		
7.6	Using XLMiner for Short-Term Forecasting	182		
7.7	Summary	182		
	Suggested Readings	183		
	Exercises	183		
<b>CHAPTER 8 NONLINEAR OPTIMIZATION 187</b>				
8.1	Introduction	187		
8.2	An Optimization Example	188		
	8.2.1 Optimizing Q1	188		
	8.2.2 Optimization Over All Four Quarters	190		
	8.2.3 Incorporating the Budget Constraint	191		
8.3	Building Models for Solver	193		
	8.3.1 Formulation	193		
	8.3.2 Layout	194		
	8.3.3 Interpreting Results	195		
8.4	Model Classification and the Nonlinear Solver	195		
8.5	Nonlinear Programming Examples	197		
	8.5.1 Facility Location	197		
	8.5.2 Revenue Maximization	199		
	8.5.3 Curve Fitting	201		
	8.5.4 Economic Order Quantity	205		
8.6	Sensitivity Analysis for Nonlinear Programs	207		
8.7	The Portfolio Optimization Model	211		
8.8	Summary	214		
	Suggested Readings	214		
	Exercises	214		
<b>CHAPTER 9 LINEAR OPTIMIZATION 219</b>				
9.1	Introduction	219		
	9.1.1 Linearity	219		
	9.1.2 Simplex Algorithm	220		
9.2	Allocation Models	221		
	9.2.1 Formulation	221		
	9.2.2 Spreadsheet Model	222		
	9.2.3 Optimization	224		
9.3	Covering Models	226		
	9.3.1 Formulation	226		
	9.3.2 Spreadsheet Model	227		
	9.3.3 Optimization	227		
9.4	Blending Models	228		
	9.4.1 Blending Constraints	229		
	9.4.2 Formulation	231		

9.4.3	Spreadsheet Model	232
9.4.4	Optimization	232
9.5	Sensitivity Analysis for Linear Programs	233
9.5.1	Sensitivity to Objective Function Coefficients	234
9.5.2	Sensitivity to Constraint Constants	235
9.6	Patterns in Linear Programming Solutions	238
9.6.1	Identifying Patterns	238
9.6.2	Further Examples	240
9.6.3	Review	244
9.7	Data Envelopment Analysis	245
9.8	Summary	249
	Suggested Readings	250
	Exercises	250
	Appendix 9.1 the Solver Sensitivity Report	254

#### **CHAPTER 10** *OPTIMIZATION OF NETWORK MODELS* 257

---

10.1	Introduction	257
10.2	The Transportation Model	257
10.2.1	Flow Diagram	258
10.2.2	Model Formulation	258
10.2.3	Spreadsheet Model	259
10.2.4	Optimization	260
10.2.5	Modifications to the Model	261
10.2.6	Sensitivity Analysis	262
10.3	Assignment Model	266
10.3.1	Model Formulation	267
10.3.2	Spreadsheet Model	267
10.3.3	Optimization	268
10.3.4	Sensitivity Analysis	268
10.4	The Transshipment Model	269
10.4.1	Formulation	270
10.4.2	Spreadsheet Model	271
10.4.3	Optimization	272
10.4.4	Sensitivity Analysis	273
10.5	A Standard Form for Network Models	273
10.6	Network Models with Yields	275
10.6.1	Yields as Reductions in Flow	275
10.6.2	Yields as Expansions in Flow	277
10.6.3	Patterns in General Network Models	280
10.7	Network Models for Process Technologies	281
10.7.1	Formulation	281
10.7.2	Spreadsheet Model	283
10.7.3	Optimization	284
10.8	Summary	284
	Exercises	285

#### **CHAPTER 11** *INTEGER OPTIMIZATION* 289

---

11.1	Introduction	289
11.2	Integer Variables and the Integer Solver	290
11.3	Binary Variables and Binary Choice Models	292
11.3.1	The Capital Budgeting Problem	292
11.3.2	The Set Covering Problem	295
11.4	Binary Variables and Logical Relationships	296
11.4.1	Relationships Among Projects	297
11.4.2	Linking Constraints and Fixed Costs	299
11.4.3	Threshold Levels and Quantity Discounts	303
11.5	The Facility Location Model	304
11.5.1	The Capacitated Problem	305
11.5.2	The Uncapacitated Problem	307
11.5.3	The Assortment Model	309

11.6	Summary	310
	Suggested Readings	311
	Exercises	311

#### **CHAPTER 12** *OPTIMIZATION OF NONSMOOTH MODELS* 315

---

12.1	Introduction	315
12.2	Features of the Evolutionary Solver	315
12.3	Curve Fitting (Revisited)	317
12.4	The Advertising Budget Problem (Revisited)	319
12.5	The Capital Budgeting Problem (Revisited)	322
12.6	The Fixed Cost Problem (Revisited)	324
12.7	The Machine-Sequencing Problem	325
12.8	The Traveling Salesperson Problem	328
12.9	Group Assignment	330
12.10	Summary	332
	Exercises	332

#### **CHAPTER 13** *DECISION ANALYSIS* 337

---

13.1	Introduction	337
13.2	Payoff Tables and Decision Criteria	338
13.2.1	Benchmark Criteria	338
13.2.2	Incorporating Probabilities	339
13.3	Using Trees to Model Decisions	341
13.3.1	Decision Trees	342
13.3.2	Decision Trees for a Series of Decisions	344
13.3.3	Principles for Building and Analyzing Decision Trees	347
13.3.4	The Cost of Uncertainty	348
13.4	Using Decision Tree Software	349
13.4.1	Solving a Simple Example with Decision Tree	350
13.4.2	Sensitivity Analysis with Decision Tree	351
13.4.3	Minimizing Expected Cost with Decision Tree	353
13.5	Maximizing Expected Utility with Decision Tree	355
13.6	Summary	358
	Suggested Readings	358
	Exercises	358

#### **CHAPTER 14** *MONTE CARLO SIMULATION* 363

---

14.1	Introduction	363
14.2	A Simple Illustration	364
14.3	The Simulation Process	366
14.3.1	Base-Case Model	367
14.3.2	Sensitivity Analysis	368
14.3.3	Specifying Probability Distributions	370
14.3.4	Specifying Outputs	371
14.3.5	Setting Simulation Parameters	371
14.3.6	Analyzing Simulation Outputs	371
14.4	Corporate Valuation Using Simulation	375
14.4.1	Base-Case Model	376
14.4.2	Sensitivity Analysis	378
14.4.3	Selecting Probability Distributions	379
14.4.4	Simulation Analysis	379
14.4.5	Simulation Sensitivity	382
14.5	Option Pricing Using Simulation	384
14.5.1	The Logic of Options	385
14.5.2	Modeling Stock Prices	385
14.5.3	Pricing an Option	388
14.5.4	Sensitivity to Volatility	390
14.5.5	Simulation Precision	390

**xii TABLE OF CONTENTS**

14.6	Selecting Uncertain Parameters	391
14.7	Selecting Probability Distributions	393
14.7.1	Empirical Data and Judgmental Data	393
14.7.2	Six Essential Distributions	394
14.7.3	Fitting Distributions to Data	398
14.8	Ensuring Precision in Outputs	400
14.8.1	Illustrations of Simulation Error	400
14.8.2	Precision versus Accuracy	401
14.8.3	An Experimental Method	402
14.8.4	Precision Using the MSE	403
14.8.5	Simulation Error in a Decision Context	403
14.9	Interpreting Simulation Outcomes	404
14.9.1	Simulation Results	404
14.9.2	Displaying Results on the Spreadsheet	406
14.10	When to Simulate and When Not to Simulate	406
14.11	Summary	408
	Suggested Readings	408
	Exercises	409
<hr/>		
<b>CHAPTER 15</b>	<b><i>OPTIMIZATION IN SIMULATION</i></b>	<b>415</b>
15.1	Introduction	415
15.2	Optimization with One or Two Decision Variables	415
15.2.1	Base-case Model	416
15.2.2	Grid Search	418
15.2.3	Optimizing Using Simulation Sensitivity	419
15.2.4	Optimizing Using Solver	422
15.3	Stochastic Optimization	422
15.3.1	Optimization of the Base-Case Model	422
15.3.2	A Portfolio Optimization Problem	425
15.4	Chance Constraints	428
15.5	Two-Stage Problems with Recourse	433
15.6	Summary	437
	Suggested Readings	438
	Exercises	438

**MODELING CASES 443****APPENDIX 1 *BASIC EXCEL SKILLS* 459**

---

Introduction	459
Excel Prerequisites	459
The Excel Window	460
Configuring Excel	462
Manipulating Windows and Sheets	463
Navigation	464
Selecting Cells	465
Entering Text and Data	465
Editing Cells	466
Formatting	467
Basic Formulas	468
Basic Functions	469
Charting	473
Printing	475
Help Options	476
Keyboard Shortcuts	477
Cell Comments	477
Naming Cells and Ranges	479
Some Advanced Tools	482

**APPENDIX 2 *MACROS AND VBA* 487**

---

Introduction	487
Recording a Macro	487
Editing a Macro	490
Creating a User-Defined Function	492
Suggested Readings	494

**APPENDIX 3 *BASIC PROBABILITY CONCEPTS* 495**

---

Introduction	495
Probability Distributions	495
Examples of Discrete Distributions	498
Examples of Continuous Distributions	499
Expected Values	501
Cumulative Distribution Functions	502
Tail Probabilities	503
Variability	504
Sampling	505

**INDEX 509**

---
